

```
var colorizer = require('colorizer').create('Colorizer');
var casper = require('casper').create({
  pageSettings: {
    loadImages: true,
    loadPlugins: false
  },
  verbose: false,
  logLevel: "debug"
});

casper.userAgent('---XXX---');

var colorizer = require('colorizer').create('Colorizer');

casper.start().viewport(800, 600).zoom(5).thenOpen('http://localhost/',
function() {
  this.capture('test.png', undefined, { format: 'png', quality: 95 });
  this.echo('Done', 'GREEN_BAR');
});

casper.run();
```

Не знаю как кто относится к подобным фразам, но у меня они вызывают лишь улыбку. Но в случае с proftpd, особенно зная его широкий функционал, я бы сказал, что его смело можно указывать в резюме, если речь конечно не о типовой конфигурации - тривиальная настройка ftp сервера.

Итак, что же такое proftpd? Как я уже говорил выше, пожалуй один из самых «мощных» и продвинутых ftp серверов. Правда у этой медали есть и обратная сторона - в нем чаще, чем в других ftp серверах находят уязвимости. Поэтому, если вы используете его на боевых серверах, то необходимо следить за обновлениями.
